

PTTEP Australasia TIMOR SEA OPERATIONS

Date: 1 November 2009

Att. PHOTO EDITORS:

Please see attached sequence of photographs of the Montara well head platform and *West Atlas* rig taken today (Sunday 1 November):

1. This morning - before the relief well intercept (with gas, oil and water cloud – as has been visible since August 21).
2. Following the interception and the pumping of heavy mud from the *West Triton* into the relief well – with the flow of gas, oil and water initially stopped. Some heavy mud (likely with some gas) visible, coming to the surface from the H1 well on the well head platform.
3. The fire from the H1 well, taken from the stern of the ‘Nor Captain’, as it moved away after deluge operations.
