

**PTTEP Australasia TIMOR SEA OPERATIONS
Incident Information # 73**

Date: 21 October 2009 1630 WST

Questions were raised today about the amount of oil leaking from the Montara well head platform.

PTTEP Australasia maintains its initial estimates based on visual observations of 300-400 barrels per day. However, the flow markedly declined within a relatively short time after the incident occurred on 21 August.
